

SAP Certified
Built on SAP Business Technology Platform

One Native DevOps Platform for SAP ECC, S/4 HANA, BTP, and CPI

ReleaseOwl is the first Enterprise-grade Native DevOps Platform designed for SAP Applications built on ECC, S/4 HANA, SAP BTP, and CPI (Integration Suite) with a mission to help companies accelerate their SAP adoption, release faster with lesser risk, and higher reliability.

ReleaseOwl serves as one platform for automated packaging, deployment, testing, monitoring, and compliance of all SAP Applications. It enables you to automate, integrate, and orchestrate end-to-end change and release management of your SAP applications with out-of-the-box integrations for Jira, ServiceNow, Azure DevOps, HCL OneTest, Tricentis, Tosca, and more.

Transport Management (ECC, S4 HANA)

- » Transport Impact Analysis is an early warning system that allows you to perform a thorough check of your transports while still in the Dev environment.
- » Deployment Automation with Validations & Approvals enables smooth change and release management.
- » Merge & Retrofit with Conflict Resolution imports fixes and changes much quicker and easier across parallel landscapes
- » ABAP Unit, gCTS & ATC Integrations brings the crux of DevOps into your SAP Development processes.
- » ABAP Visual Comparator lets you graphically compare ABAP versions of an Object across the SAP landscape.
- » Transport backout/rollback allows you to roll back any changes deployed to production, in case of issues.

SAP BTP

- » Automated Deployment of MTAR and CAP artifacts with Git integration.
- » Static Code Analysis with SonarQube, JSLint & ATC ensures best practices and compliance.
- » Jira/Azure DevOps plug-ins webhooks to deploy the user stories based on the change in user story status.
- » Automated Git Ops and Deployment of ABAP Cloud Applications.

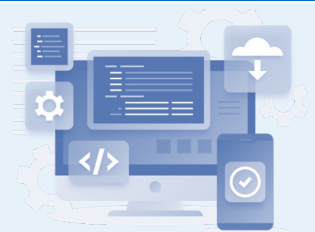

SAP CPI

- » Deployment automation of CPI Artifacts reduces manual tasks, increasing productivity.
- » CPI Unit Test Generator lets you generate unit tests for SAP CPI (Integration Suite) applications with few inputs.
- » IFlow configuration manager enables you to compare and update configuration values for each landscape.
- » CPI Governance Rule Engine made easy with the Rule Editor.
- » Backup and Rollback allows you to redeploy the previous state of the artifact.

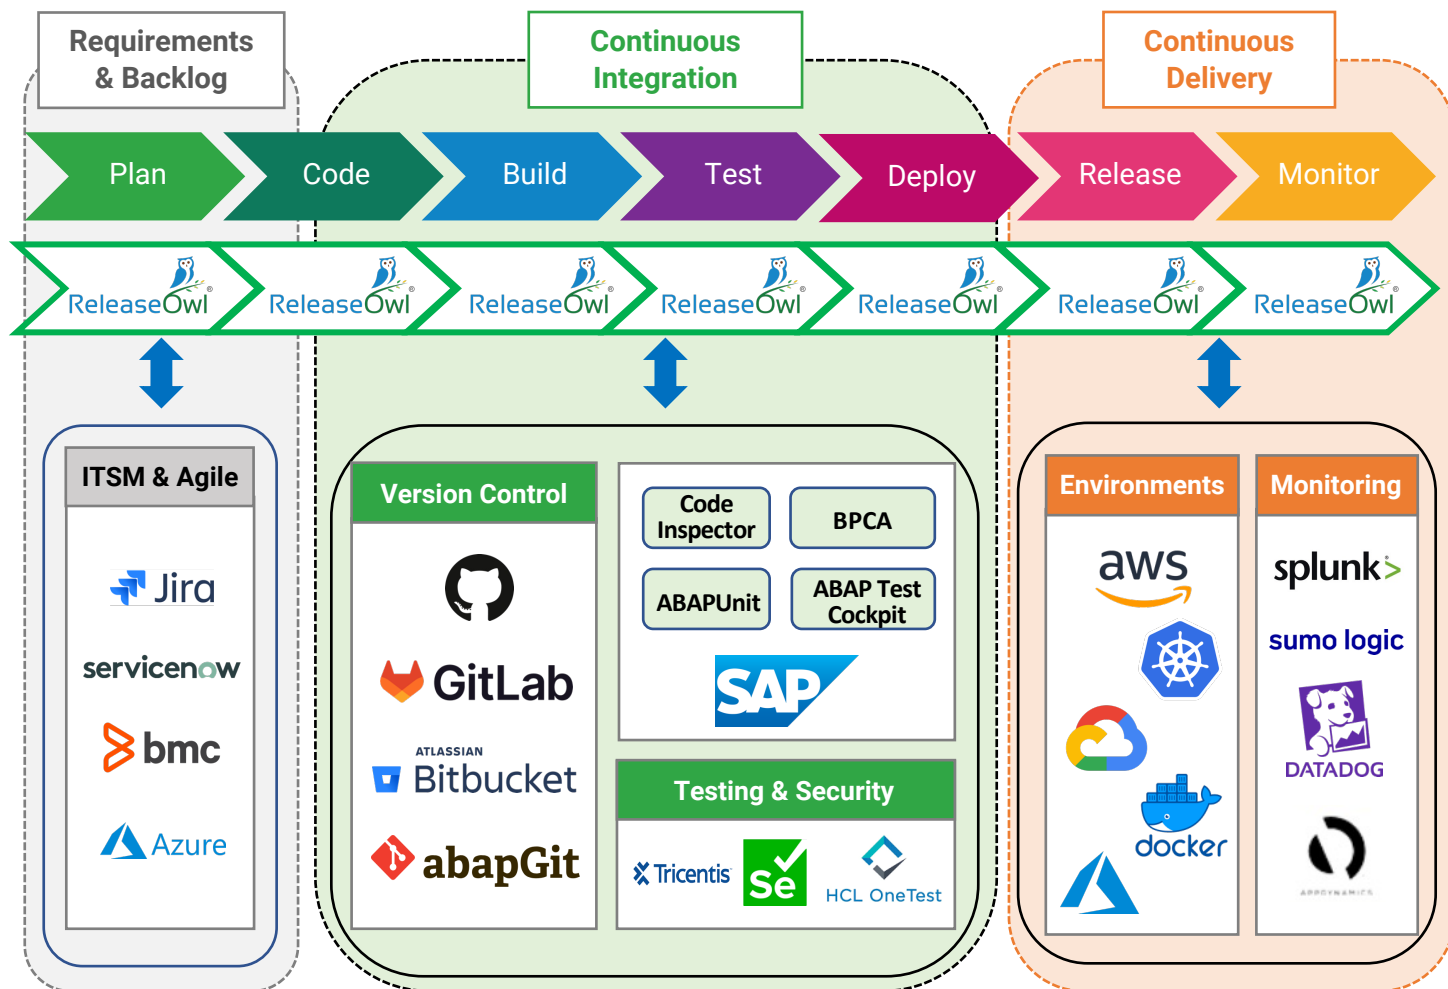

Test Automation for SAP Applications

- » Out-of-the-box integration with Selenium, Tricentis, Tosca and HCL OneTest UI
- » GIT integration for test repositories
- » Test execution & granular test reports
- » Integration with CI/CD pipelines

Benefits & ROI with ReleaseOwl

5X Faster Go-to-Market

CI/CD pipelines, compliance checks with integration, and orchestrated workflows drives seamless collaboration and exponentially faster go-to-market.

70% Reduced Downtime

With the use of an early warning system, backup, and rollback built into your SAP development processes, downtime occurrences are significantly reduced.

3X Improved Productivity

Code reviews, compliance testing, and impact analysis integrated into the development process reduces defects and ensures more productive development time.

0 Setup and Maintenance Cost

ReleaseOwl enables DevOps workflows for all types of SAP applications. Upgrades and maintenance are completely run by ReleaseOwl, as part of its package.
